

KOODAL — Landing Page PRD

2026-09-20 · @Someone

Overview

This landing page is the validation asset for KOODAL, testing whether Chennai's pickleball/padel, badminton, board-game and quiz-night audience will leave contact info for a product that fills missing headcounts in their plans — before any app is built.

It replaces the cold survey link, which failed to generate responses, with a targeted single-action page: state the promise, show the mechanic, ask for one thing (a WhatsApp number or Instagram handle).

Name: KOODAL (Tamil, roughly "gather" / "bring together")

Tagline options under consideration:

- "Bring the plan together." — straightforward
- "Got a plan? Find your people." — Gen-Z tone
- "Plan irukku. Aal illa?" — Chennai/Tanglish tone, likely strongest local resonance

Goals & success metrics

Primary goal: measure what share of targeted visitors take the single call-to-action (leave a WhatsApp number or Instagram handle), as a proxy for real intent to use KOODAL.

Metric	Target	Read
Visitor → signup conversion rate	10–20%	Solid signal, worth pursuing further
Visitor → signup conversion rate	Below 3–5%	Pitch or audience isn't landing — revisit messaging or targeting
Cost per signup (paid traffic)	As low as possible	Secondary read on channel efficiency
Activity-category click-through	N/A (directional)	Which category (pickleball/padel, badminton, board games, quiz) draws the most interest

Secondary signals: scroll depth (do people read past the hero), time on page, and which traffic source (personal outreach vs. paid ads vs. community pages) converts best.

Target audience

Urban Chennai residents, roughly 20–35, mobile-first, reached first in one zone (OMR corridor or a college cluster) rather than the whole city.

- Already play or want to play pickleball/padel, badminton, or attend board-game and quiz nights
- Regularly organize or join group plans and have felt the pain of a plan falling short on people
- Found primarily through geo-targeted Instagram/Meta ads, venue and community Instagram pages, and personal outreach — not organic search

Page structure & content

Single-page, single-scroll layout. No navigation menu — the only job of the page is to move a visitor to the one CTA.

Section	Purpose	Content
Hero	State the promise in 5 seconds	KOODAL wordmark + tagline (pick one of the three above); one-line subhead explaining the mechanic; primary CTA form
How it works	Explain the mechanic	3-step visual: Post your plan → Nearby people join → Plan happens
Activities	Show scope, surface category interest	Cards/icons: Pickleball & Padel, Badminton, Board Games, Quiz Nights (each clickable, tagging which the visitor is most interested in)
Credibility	Build trust, avoid feeling generic	"Currently testing in OMR, Chennai" line; live or static count of people already signed up
Closing CTA	Second chance to convert after scrolling	Repeats the same single-field form
Footer	Minimal	Contact/social link only — no company boilerplate needed at MVP stage

The CTA form itself: one field (WhatsApp number or Instagram handle) plus the activity tag carried over from wherever they clicked. No name, email, or additional fields — every extra field lowers conversion.

UI/UX & visual design requirements

- **Mobile-first.** Most traffic arrives from Instagram/Meta ads and community-page links opened on a phone; design for a 375–430px viewport first, desktop second.
- **Aesthetic:** modern, energetic, flat-illustration style aimed at a young urban Indian audience — bold sans-serif typography, generous whitespace, rounded shapes over sharp corners.
- **Color:** one warm, energetic palette (teal + coral/orange + soft yellow), consistent with the poster direction already used for offline outreach, so online and offline materials feel like one campaign.

- **CTA button:** high-contrast, sticky/fixed on mobile scroll so it's always reachable without hunting for it.
- **Load speed:** under 2 seconds on a typical 4G connection — slow load directly kills conversion on paid traffic.
- **Accessibility:** sufficient color contrast, legible type sizes (16px minimum body text), and functional without animation for users with `prefers-reduced-motion` set.

Animation & interaction requirements

Element	Animation	Why
Section reveals	Subtle fade + slide-up as each section enters the viewport on scroll	Gives the page a modern, alive feel without distracting from the CTA
"How it works" steps	The 3 steps animate in sequence (not all at once) as the visitor scrolls into that section	Reinforces the mechanic visually instead of just in text
Activity cards	Slight scale/lift on hover or tap	Signals they're interactive and encourages the category-interest click
CTA button	Scale + color-shift micro-interaction on hover/tap	Draws the eye to the one action that matters
Form field	Focus-state animation (border highlight, label float)	Standard modern-form feel, reduces friction
Submit success	Short celebratory confirmation (checkmark animation, brief message) replacing the form	Confirms the action landed, ends the flow on a positive note

Constraints:

- Animations must never block or delay interaction — the CTA must be clickable immediately, even before an animation finishes.
- Respect `prefers-reduced-motion`: fall back to instant state changes, no motion, for users who've set that preference.

- Keep total animation/asset weight light — CSS/JS-driven animation preferred over heavy video or large Lottie files, to protect the under-2-second load target on mobile data.

Technical requirements

- **Format:** single self-contained responsive page (HTML/CSS/JS), no login, no multi-page navigation.
- **Form capture:** stores each submission (contact info + selected activity tag + timestamp) to a lightweight, persistent store the founder can review — no app backend needed at this stage.
- **Analytics:** page views, scroll depth, CTA clicks, and conversion rate, at minimum — needed to actually score the page against the 10–20% target.
- **Hosting:** a public, shareable link that works the same whether reached from a WhatsApp message, an Instagram bio link, or a paid ad.
- **Performance:** optimized for 4G mobile data conditions typical in Chennai; no dependency on desktop-only interactions.

Out of scope

- Actual plan-posting or people-matching functionality
- Account creation, login, or user profiles
- Payment or venue-booking integration
- Multi-page site or navigation menu
- Admin dashboard beyond a raw export of signups

These belong to the manual concierge MVP (WhatsApp/Instagram-run matching) and, later, the real app — not this page.

Timeline & rollout

Step	Duration	Detail
Design & build	2–3 days	Single page, per this spec

Step	Duration	Detail
Soft launch	Ongoing	Share directly through personal outreach and in-person conversations at courts/café's (highest-trust channel)
Paid traffic test	~1 week	Small geo-targeted Meta/Instagram ad spend (₹500–1500) aimed at OMR/Chennai, interests in pickleball, padel, board games
Review checkpoint	After ~150–200 targeted visitors or ~1–2 weeks	Score conversion rate against the 10–20% target; decide go/no-go on running the manual concierge MVP next
